

Herpes Simplex Virus Type 1 (HSV-1) Glycoprotein H monoclonal antibody BBH1

Hybridoma cell line producing BBH1 antibodies raised against Herpes Simplex Virus Type-1 envelope protein Glycoprotein H, which are mouse monoclonal antibodies of the IgG2a isotype. Works well for immunofluorescence (IF) on fixed specimens and for immunoprecipitation (IP) on triton solubilised samples. Can be used to detect protein by Western blot (no other anti-gH antibody detects protein by western blot).
